

DELAMINATOR

CD 45D

The CD45D delaminating machine has been designed to handle large LCD panels and uses the same principles as our proven range of delaminating machines.

Featuring:

Panel face down removal process with film ejected from the machine as it is removed.

Shoe plate removal method with powered non-contact pickup roller to minimise the risk of Mura.

Selectable peel temperature with automatic thermocouple control.

A re-usable leader to engage the film into the machine.

Rubber coated exit rollers to support the panel during delamination and prevent any possible glass distortion.

Process Capabilities:

Delaminates polariser film from LCD panels.
Accepts bare glass or backlight still in place.

Will accept panels of any thickness, including deep section backlight units.

Machine specification:

All anodised aluminium & st. steel construction.
110v or 220v compatible.
Supplied with corner peel hand tool.
Solid steel pickup roller.

Fully adjustable pickup roller speed control.
Operator selectable heat control to ease hard to remove films.

Overall dimensions: 2000 x 1180 x 1000mm (WxDxH)
Approx weight: 145Kgs
Built to order – leadtime 8-10 weeks.
